SUMMARY

Product and operations leader with 8+ years running products and the teams behind them. I bring order to fast-moving teams: clear owners and priorities, written specs and SOPs, visible status and KPIs, and clean handovers, so remote and async teams ship without chasing. Since July 2026 I have worked part-time with a Shopify apps startup on behaviour-based plugin features and operations. At K2U I led a team of 18 plus external experts, and earlier I founded a marketplace and a Shopify D2C brand. I am currently completing Duke University's AI Product Management Specialization.

Key results: 3.7% higher AOV from behaviour-based plugin nudges | about 50 new brands onboarded in 3 months | update cycles cut from 80-90 days to 30-45 | team onboarding cut from about 3 weeks to about 1 | expert reporting from 1 hour to 15 minutes | 24% higher course completion | 8:1 referral payback

EXPERIENCE

Product and Operations Consultant (part-time) Jul 2026 to Present
yourtoken.io (Shopify apps used by 400+ D2C brands), Remote

- Designed behaviour-based nudges for the Shopify plugin suite, built on shopper psychology; they lifted average order value by 3.7% and supported higher retention and lifetime value.
- Brought structure to a fast-moving startup: moved internal communication to Slack (WhatsApp kept for clients, who prefer it), which stopped reports getting lost and cut handover gaps.
- Worked with the developers to build a central operations dashboard: daily work logs, open tickets, sales progress and each person's open items, linked to GitHub and Slack so updates arrive as Slack notifications.
- Defined KPIs for team members and success metrics for each plugin, so founders could see progress without chasing.
- The new plugin features and streamlined processes helped onboard about 50 new brands in 3 months.

Product Manager Sep 2022 to Oct 2026
K2 Partnering Solutions (K2U, formerly Focus on Force), Remote

- Owned a 57-course portfolio for individual learners and launched about 45 courses myself, from demand research to launch and maintenance.
- Led a learner progress dashboard from interviews and wireframes to an approved build; it helped lift course completion by 24%.
- Ran live bootcamps for learners, streamed on LinkedIn and YouTube. When an instructor did not show up, I rebuilt one around a quiz with loyalty-point prizes and team-led sessions: 450+ attended live and about 17% bought a paid course within 24 hours.
- Ran a 24-hour SLA on premium learners' questions: triage, the waiting queue and escalation to the expert team.
- Defined the KPIs for every product at launch and tracked them afterwards; prepared post-launch projections.
- Took an AI workflow from idea to approved build: user interviews, wireframes, flowcharts and a management pitch. It flags course content to update after each Salesforce release, with a human review step before anything is changed; update cycles fell from 80-90 days to 30-45.
- Designed a revenue-sharing tool for our external experts, built by the engineering team: it pulls sales from Metorik, so each expert sees their own sales and refunds by date and generates their invoice from our template. Monthly reporting per expert fell from about 1 hour to about 15 minutes (about 8 experts).
- Redesigned onboarding and wrote the SOPs: new team members now get up to speed in about 1 week instead of about 3, with experienced teammates running the walkthroughs.
- Led a team of 18 (15 content team members and 3 project managers) and about 8 external contractors and experts across time zones; ran work in Jira within approved budgets. After the acquisition the team shrank to 5, and I automated work instead of asking for replacements.

Founder and CEO Dec 2019 to Jan 2023

Phatse (Celebratious), Gurgaon, India

- Founded an online party marketplace: customers booked food, cakes, decorations and flowers from nearby organisers; we earned 20% commission.
- Reached ₹600K in bookings in the first 2 months: about 85 orders at a ₹7,000 average order value.
- Designed an instant referral reward: acquisition cost near ₹600 a customer against ₹4,800 commission over 2 years (8:1). It drove 50% month-over-month growth.
- Set up email journeys and campaigns in Mailchimp and Sendinblue (welcome, re-engagement, referral reminders). I tracked churn for 6 months, 1 before launch and 5 after: it fell 22%.
- Launched Boxyt (Dec 2021 to Sep 2022), a D2C "party in a box" brand under Phatse. I built the Shopify store myself, with discount, loyalty and cart-bar apps, Razorpay payments, and Mailchimp and Sendinblue campaigns.
- Interviewed 100+ customers and event organisers and set roadmap priorities from what they said; NPS rose 30%.
- Set the product vision and roadmap. Wrote user personas, PRDs and user stories and worked through them with engineers.
- Led a team of 18: 8 engineers, 5 in sales and marketing, and 5 interns. Ran Google Ads for acquisition.
- Named among India's Top 25 startups at the BITS Pilani Entrepreneurship Conclave 2021.

Product Manager Nov 2017 to Dec 2019

SearchFinn Inc., Makati, Philippines

- Worked with engineers to rebuild a multi-page web app as a React single-page app, cutting load time by 40%.

F&B Supervisor Dec 2010 to Jun 2017

Carnival UK (P&O Cruises), Southampton, UK

- Managed Marco Pierre White's onboard restaurant and a dining team of 60 across the 7-ship fleet, with an NPS above 80 on 85%+ of cruises.
- Trained new joiners in safety, hygiene, order handling and guest service.

SKILLS

Product: consumer product discovery, learner and customer interviews, roadmap and backlog prioritisation (RICE), KPI definition and tracking, engagement, retention and referral features, A/B testing, PRDs, user stories, user personas, wireframing, flowcharts, pricing and competitive analysis, unit economics (CAC, LTV, AOV), product analytics, funnel and retention tracking, UAT, stakeholder presentations

Operations: process design and SOPs, async communication and weekly updates, handovers, KPI and metric design, ticket triage and escalation, SLAs, contractor and vendor management, release coordination, onboarding and training

AI product literacy: ML lifecycle (CRISP-DM), choosing an algorithm, human-in-the-loop AI workflows, working with AI and ML teams on what to build and how to measure it

Delivery: Jira, Asana, Trello, agile, kanban and waterfall, budget tracking, SME management

Tools: Shopify, WooCommerce, Mailchimp, Sendinblue (Brevo), Razorpay, Mixpanel, Google Analytics, Google Ads, Figma, Miro, Salesforce (testing in dev and UAT orgs), WordPress, LearnDash, Google Workspace, Slack

Technical: HTML, CSS (Tailwind, Bootstrap), JavaScript (React), Git, GitHub

CERTIFICATIONS

- AI Product Management Specialization | Duke University (Coursera) | in progress
- Google Project Management Certificate, incl. Agile Project Management | Google (Coursera) | 2021
- Agile with Atlassian Jira | Atlassian | 2021
- Growth Strategies, Financing and Profitability | Wharton Online | 2021
- Full-Stack Web Development | Developer bootcamp | 2022

EDUCATION

- B.Sc. Hotel Management, Sikkim Manipal University, 2005 to 2008
